

## **EDUCATIONAL PHILOSOPHY**

The Board affirms that the goal of education is the well-rounded development of each child. The role of the school is to impart a love for learning and to foster well developed analytical and intellectual skills and practical knowledge in cooperation with the home and community. The School District will assist the intellectual, social, cultural, emotional, physical, and moral growth of each student. Our schools will instill within each child an awareness of civic responsibilities, the value of civil discourse in interactions with others and respect and tolerance for others. These attributes will to assist student development and preparation for assuming a vital role in an ever-evolving and increasingly diverse society.

The Board subscribes to the general theory of individual differences; specifically, that each student is an individual and has his / her own innate ability, ambitions, and emotions. In the process of educating individual students, our educational program should be challenging and reflect a concern for student needs based on individual capabilities.
